## Important Notes

1. Larger HDPE tanks may include exterior steel banding or fiberglass reinforcement for additional strength. Special ordered optional inspection manhole ports are recommended for larger tanks (includes cover with neoprene gasket, stainless steel nuts, bolts, and washers).
2. All tanks can be special ordered with Mipt, Flanged (CL150), and Fipt connections or varying combinations other than standard connections specified. Inlets or vents may also be custom ordered for installation in covers instead of tank sides.
3. For transitions from Mipt HDPE tank connections to LabWaste ${ }^{\circledR}$ piping, use part numbers $\mathrm{P} 101-\mathrm{xxxC}$, Female Adapter. CPVC tank sockets can be cemented directly to LabWaste ${ }^{\circledR}$ piping. For transitions from ALL flanged connections to LabWaste ${ }^{\circledR}$ piping, use part numbers $854-x x x C$, Flange ( $x x x=$ size code).
4. Venting is required by codes but may be accomplished either at the tank or in-line.
5. Neutralization tanks and tank extensions are not warranted for direct burial applications. Tanks must be properly placed and secured with no applied stresses, within a dry concrete vault with use of a protective traffic cover as deemed appropriate. However, if direct burial is used without warranty, custom centerlines must be furnished from top of cover down to fitting centerline instead of specified tank bottom to fitting centerline since tank heights can vary.
